DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Porter et al., US patent 5,410,545.

Porter discloses a method for tracking and recording metric parameters in a product item comprising the steps of:

(a) positioning an Electrically Erasable Programmable Read Only Memory (EEPROM) Chip in the item in figure 2 element 118, examiner is interpreting the item to be the memory module as defined by Porter in column 2 lines 6-17, which Porter also calls a memory node as shown in Figure 2 element 26 (the combination of elements 40 and 36);

(b) automatically tracking and recording all parameters in the EEPROM in figure 7; and

Porter does not explicitly disclose reading said parameters recorded in step (b) into a database. However Porter does discloses in column 2 lines 33-44 that the purpose of maintaining an error log of a memory module is that when a malfunctioning memory module is returned to the manufacturer, a repair technician can easily isolate the errors in order to make effective modifications to the memories to avoid future

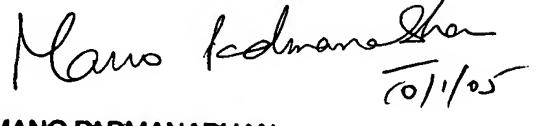

failures. While Porter does not disclose the information is stored on a database, it would have been obvious to one of ordinary skill in the art at the time of invention that the manufacturer of the memory module would store the data retrieved from returned memory modules in order to maintain a consistent record of all returned memory modules in order to provide the manufacturer a heuristic approach to making modifications to memories in an attempt to prevent future failures.
